Energy Landscapes, Inherent Structures, and Condensed-Matter Phenomena

Frank H. Stillinger

Energy Landscapes, Inherent Structures, and Condensed-Matter Phenomena Frank H. Stillinger

This book presents an authoritative and in-depth treatment of potential energy landscape theory, a powerful analytical approach to describing the atomic and molecular interactions in condensed-matter phenomena. Drawing on the latest developments in the computational modeling of many-body systems, Frank Stillinger applies this approach to a diverse range of substances and systems, including crystals, liquids, glasses and other amorphous solids, polymers, and solvent-suspended biomolecules.

Stillinger focuses on the topography of the multidimensional potential energy hypersurface created when a large number of atoms or molecules simultaneously interact with one another. He explains how the complex landscape topography separates uniquely into individual "basins," each containing a local potential energy minimum or "inherent structure," and he shows how to identify interbasin transition states--saddle points--that reside in shared basin boundaries. Stillinger describes how inherent structures and their basins can be classified and enumerated by depth, curvatures, and other attributes, and how those enumerations lead logically from vastly complicated multidimensional landscapes to properties observed in the real three-dimensional world.

Essential for practitioners and students across a variety of fields, the book illustrates how this approach applies equally to systems whose nuclear motions are intrinsically quantum mechanical or classical, and provides novel strategies for numerical simulation computations directed toward diverse condensed-matter systems.

From reader reviews:

Charles Wilkerson:

Do you have favorite book? For those who have, what is your favorite's book? Book is very important thing for us to know everything in the world. Each e-book has different aim or perhaps goal; it means that publication has different type. Some people sense enjoy to spend their time for you to read a book. They may be reading whatever they take because their hobby is definitely reading a book. Think about the person who don't like looking at a book? Sometime, individual feel need book if they found difficult problem or perhaps exercise. Well, probably you will want this Energy Landscapes, Inherent Structures, and Condensed-Matter Phenomena.

Judith Duncan:

The book Energy Landscapes, Inherent Structures, and Condensed-Matter Phenomena can give more knowledge and also the precise product information about everything you want. Why must we leave a good thing like a book Energy Landscapes, Inherent Structures, and Condensed-Matter Phenomena? Several of you have a different opinion about book. But one aim in which book can give many info for us. It is absolutely proper. Right now, try to closer using your book. Knowledge or information that you take for that, you can give for each other; you are able to share all of these. Book Energy Landscapes, Inherent Structures, and Condensed-Matter Phenomena has simple shape but the truth is know: it has great and massive function for you. You can appearance the enormous world by open and read a e-book. So it is very wonderful.

Dennis Lewis:

What do you in relation to book? It is not important together with you? Or just adding material when you really need something to explain what yours problem? How about your extra time? Or are you busy person? If you don't have spare time to do others business, it is make you feel bored faster. And you have extra time? What did you do? Every person has many questions above. They must answer that question since just their can do this. It said that about e-book. Book is familiar in each person. Yes, it is right. Because start from on guardería until university need that Energy Landscapes, Inherent Structures, and Condensed-Matter Phenomena to read.

Ruth Little:

Your reading 6th sense will not betray anyone, why because this Energy Landscapes, Inherent Structures, and Condensed-Matter Phenomena e-book written by well-known writer we are excited for well how to make book that can be understand by anyone who else read the book. Written in good manner for you, dripping every ideas and composing skill only for eliminate your personal hunger then you still question Energy Landscapes, Inherent Structures, and Condensed-Matter Phenomena as good book not only by the cover but also through the content. This is one reserve that can break don't ascertain book by its cover, so do you still needing another sixth sense to pick that!? Oh come on your reading sixth sense already said so why

you have to listening to yet another sixth sense.
