The Turtle and the Stars: Observations of an Earthbound Astronomer

Sifu Arthur Upgren

The Turtle and the Stars: Observations of an Earthbound Astronomer Sifu Arthur Upgren
“An approachable potpourri, Upgren’s essays will delight and inform astronomy buffs, whether students or recreational readers.” —*Booklist*

Why is a clear sky brighter near the horizon while a cloudy one is at its lightest overhead? What color is the atmosphere of Mars, and might it someday appear as blue as ours? How is it that the Milky Way casts shadows? Why does the Taj Mahal glimmer when you gaze up at it?

In *The Turtle and the Stars*, astronomer Arthur Upgren guides us through the physical phenomena that produce our sky and galaxy in all their variety and moods. He invites us to contemplate the natural beauty of the universe: a leatherback turtle depositing her eggs under a sky lit only by Venus, a total solar eclipse in Venezuela, the play of the spectrum on the cathedral at Chartres.

Sprinkled with references to history, literature, film, and music, *The Turtle and the Stars* is a treasure trove of information for armchair astronomers and naturalists alike.
