Chemical Sensors - Volume 3 Polymers and Other Materials (The Sensors Technology Series) Ghenadii Korotcenkov

This massive reference work covers all major categories of sensor types and their general functional usage from monitoring and analyzing gases, to analyzing liquids and compounds of all kinds. This will become THE reference work on sensors used for chemical detection and analysis. "Chemical Sensors" (in six volumes) offers a one-stop source of information on nearly every type of sensor used for chemical detection and analysis, including how such sensors are made and their typical applications. The work: * Covers major classes of sensors, including Adsorption sensors, Electrochemical Sensors, Metal Oxide Sensors, Schottky-based gas sensors and Photoelectrical Sensors * Provides in-depth coverage of materials used for sensors, including semiconductors, solid electrolytes, polymer and bio-based membranes, and ceramics * Provides abundant examples of uses and applications from gas detection to composition of water and liquid detection to chemical sensors used in cars, aircraft, food quality and biomedical applications.
