Bringing the Sun Down to Earth: Designing Inexpensive Instruments for Monitoring the Atmosphere

David R. Brooks

In 1998, my colleague, Forrest Mims, and I began a project to develop inexpensive handheld atmosphere monitoring instruments for the GLOBE Program, an international environmental science and education program that began its operations on Earth Day, 1995. GLOBE's goal was to involve students, teachers, and scientists around the world in authentic partnerships in which scientists would develop instrumentation and experimental protocols suitable for student use. In return, data collected by students and their teachers would be used by scientists in their research. This kind of collaboration represented a grand vision for science education which had never before been attempted on such a scale, and we embraced this vision with great enthusiasm. Between 1998 and 2006, Forrest Mims and I collaborated on the development of several instruments based on Mims' original concept of using light emitting diodes as spectrally selective detectors of sunlight, which was first published in the peer-reviewed literature in 1992. These instruments have evolved into a set of tools and procedures for monitoring the transmission of sunlight through the atmosphere, and they can be used to learn a great deal about the composition of the atmosphere and the dynamics of the Earth/atmosphere/sun system. If measurements with these instruments are made properly, they have significant scientific value, as well.

From reader reviews:

Amy Medina:

This book untitled Bringing the Sun Down to Earth: Designing Inexpensive Instruments for Monitoring the Atmosphere to be one of several books that best seller in this year, that is because when you read this e-book you can get a lot of benefit onto it. You will easily to buy this specific book in the book retail outlet or you can order it through online. The publisher with this book sells the e-book too. It makes you more readily to read this book, because you can read this book in your Touch screen phone. So there is no reason to you to past this guide from your list.

Gary Lafountain:

The actual book Bringing the Sun Down to Earth: Designing Inexpensive Instruments for Monitoring the Atmosphere will bring you to the new experience of reading any book. The author style to elucidate the idea is very unique. In case you try to find new book to see, this book very ideal to you. The book Bringing the Sun Down to Earth: Designing Inexpensive Instruments for Monitoring the Atmosphere is much recommended to you you just read. You can also get the e-book in the official web site, so you can more readily to read the book.

Benjamin Munk:

Why? Because this Bringing the Sun Down to Earth: Designing Inexpensive Instruments for Monitoring the Atmosphere is an unordinary book that the inside of the guide waiting for you to snap it but latter it will jolt you with the secret it inside. Reading this book close to it was fantastic author who all write the book in such awesome way makes the content inside easier to understand, entertaining approach but still convey the meaning fully. So , it is good for you for not hesitating having this any longer or you going to regret it. This amazing book will give you a lot of rewards than the other book have such as help improving your proficiency and your critical thinking technique. So , still want to postpone having that book? If I had been you I will go to the e-book store hurriedly.

Rachel Cady:

Don't be worry for anyone who is afraid that this book will certainly filled the space in your house, you may have it in e-book approach, more simple and reachable. That Bringing the Sun Down to Earth: Designing Inexpensive Instruments for Monitoring the Atmosphere can give you a lot of good friends because by you investigating this one book you have point that they don't and make a person more like an interesting person. That book can be one of one step for you to get success. This publication offer you information that perhaps your friend doesn't recognize, by knowing more than some other make you to be great individuals. So , why hesitate? Let us have Bringing the Sun Down to Earth: Designing Inexpensive Instruments for Monitoring the Atmosphere.
